

CASEY DEL CARPIO BARTON

APPLIED AI SYSTEMS ARCHITECT | AGENT INFRASTRUCTURE ENGINEER

Honolulu, Hawaii | glacier.equilibrium@gmail.com | github.com/GlacierEQ

I build the operating layer between model capability and usable, trustworthy outcomes. My work combines application intelligence, deterministic multi-agent coordination, evidence-aware infrastructure governance, document systems, portable context, and human-machine interfaces. I bring field-inspection discipline to software: isolate the real failure, distinguish observation from inference, build the narrowest useful mechanism, test the promise, expose the limit, and leave an artifact another person or machine can inspect.

EXECUTED PROOF

Portfolio Receipt Router: 69/69 tests; direct and reusable CI passed; artifact 8910423397; zero external queries and actions.

Five bounded infrastructure source promotions: 166 tests across Cooling, Energy, Servers, Security, and Nanosphere; 19 separate Energy memory tests.

AKOS repository scope: 118/118 full tests, 10/10 forge tests, and 4/4 PSYSOC-X calibration tests recorded.

SELECTED SYSTEMS

Portfolio Receipt Router - Replaced an overstated autonomous controller with a fail-closed local evidence router that validates source states, reconciles test and artifact totals, blocks unfinished candidates, and preserves compatibility without executing external actions.

Job Application Helix - Connects role research, current repository evidence, promotion state, resume generation, portfolio presentation, application packaging, and follow-up through one governed record.

Agent Coordinator - Deterministic task ownership, dependency order, capacity, priority, shared budgets, bounded retries, and visible refusal or closure.

Resume Shapeshifter - Separates canonical facts from role-calibrated presentation so tailored outputs stay truthful, reviewable, and reproducible.

PSYSOC-X - Changes tone, density, ordering, skepticism, and explanation depth without changing facts, uncertainty, dignity, authority, or evidence state.

EXPERIENCE

GlacierEQ - Founder / Applied AI Systems Builder | 2025-Present

Designs, implements, audits, and documents interconnected AI, agent, evidence, document, memory, infrastructure, and hiring systems. Converts broad ideas into typed contracts, runnable slices, failure behavior, deterministic validation, current-state receipts, and audience-calibrated artifacts.

Diamond Head Home Inspections - Certified Home Inspector | Honolulu | 2020-2024

Inspected residential systems and translated field observations into decision-ready reports. Developed disciplined habits around evidence capture, uncertainty, safety, system interaction, defect priority, and clear communication under time constraints.

TECHNICAL PROFILE

Primary: Python, TypeScript, JavaScript, SQL, Bash, Node.js, React, Next.js, FastAPI.

Architecture: REST, JSON-RPC, MCP, JSON Schema, Protocol Buffers, event/state-machine design, idempotency, authority and evidence models.

Delivery: Git, GitHub Actions, Docker, Vercel, tests, static analysis, dependency auditing, deterministic release gates.

CASEY DEL CARPIO BARTON | APPLIED AI SYSTEMS ARCHITECT

Additional bounded exposure: Go, Rust, C, C++, CUDA, Swift/Metal, Julia, R, Verilog/SystemVerilog, WebAssembly.

INDEPENDENT TECHNICAL EXHIBITS

xAI / Colossus - Public receipt router plus bounded Cooling, Energy, Servers, Security, and Nanosphere source promotions. Microcode remains reviewed and execution-blocked, not firmware-control proof.

Anthropic - Deterministic Agent Coordinator and related bounded reliable-agent experiments.

Other company-aligned work - Independent public-domain studies for cloud, accelerators, distributed systems, workspace intelligence, browser agents, and mission software; company naming never implies affiliation.

WORKING PRINCIPLES

Build the invention before explaining the framework. Capability is not authority. Source presence is not behavioral proof. A successful build is not a production deployment. Completion requires a usable artifact, verification, persistence, and an honest boundary.

EDUCATION

University of Hawaii at Manoa - B.S. Marine Biology, 2016

AWS Cloud Institute - Cloud Application Developer program, 2025-2026, in progress

EVIDENCE BOUNDARY

Independent GlacierEQ systems and bounded technical exhibits. No company affiliation, proprietary access, customer use, production scale, measured business impact, or formal people-management experience is implied without an exact receipt.
